Uncover What Lies Beneath

You suspect something to be wrong. You might even know it. What if you have a breach and are leaking data?
Find out in a matter of minutes.

Detect it, don't destroy it

In just three years security breaches caused by malware and hacking have increased by over 300%*. Standard procedure after an incident is to take the machine off the network and reinstall it. However, all evidence is destroyed as to the cause and effect of the infection.

When you receive calls on helpdesk or suspect something to be wrong, you simply run CIRK and have the results on your desk same day.

> *We got help when most needed and it was instant, discreet and highly professional*

Three ways to use CIRK

A security incident needs investigation

A suspected incident needs confirmation

A standard routine check

*Verizon 2014 Data Breach Investigations Report

When knowledge is power

After suspecting an incident or as part of a routine check you run CIRK, which scans the machine for malware at various different levels looking for signs of infection. At the end it takes a complete memory dump, creates a baseline for future comparison, and sends all collected data to CSIS' forensic specialists for confirmation.

You are provided with a comprehensive report of the incident including the complete timeline, cause of the security breach and recommendations for further steps. The reports can be used in legal proceedings, for audit purposes, crisis management and much more.

A CIRK scanning is completed on the same day it is run and you are left armed with extensive knowledge of the incident and what to do next.

Why CSIS?

Being the preferred partner of manufacturing corporations and financial insitututions for a decade, our highly qualified specialists develop unique solutions based on the current threat picture and concrete customer needs. With product installations in 70 countries, and data centres across three continents, we keep track daily of the IT criminals' digital whereabouts and combat their crime.

" The promptness of the reports gives us an edge on the problem so we can deal with it before it deals with us "
