IT Security House™
ITSH

Last Line of Defence

The security business is a jungle. What really matter are your corporate assets. Protecting your secrets. CSIS gives you the ammo.

Keep it in the company

To keep sensitive data safe is the number one concern as data breaches occur worldwide by the minute*. Secure DNS not only blocks evil web content and detects intrusions to your network but also prevent data leakages when already infected.

Free internal resources and get a complete overview of the current IT security status. All implemented in one hour with no server or software installations.

“ Our daily anti-virus alerts were reduced by 60%.
Excellent tool! ”

IT Security Consultant, leading brand store in Scandinavia

*IT Security Risk Survey 2014, Kaspersky Lab.

**Infections detected from 40 botnets and CSIS' sinkholes on October 8, 2014.

Why is this service unique?

Unlike other Internet traffic filters, Secure DNS is concerned with the combination of source and destination traffic. This is particularly an advantage when dealing with malware, data leak prevention and new threats. Besides blocking malicious content it detects your network intrusions and prevent them leaking your data.

Because the service does not require any client software or configuration changes, it automatically covers all computers and devices in your network. From Macs and smartphones to embedded systems and unauthorized devices plugged in by your users.

With real-time information at your disposal you never need wait for a knock at the door to tell you something is wrong.

Why CSIS?

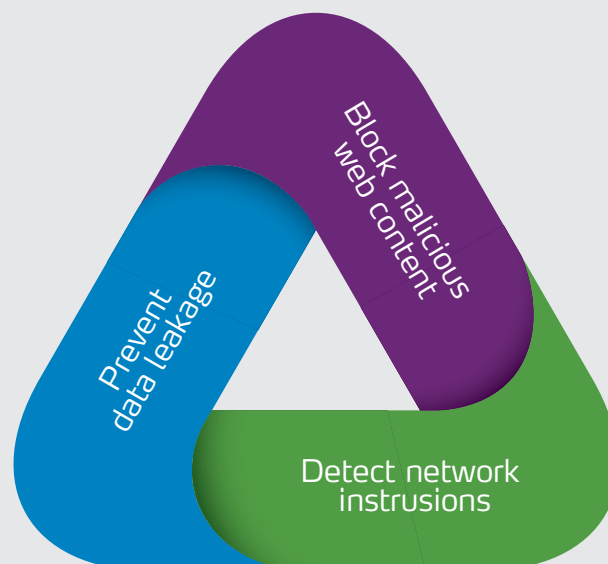

Being the preferred partner of both manufacturing corporations and financial institutions for a decade, our highly qualified specialists have access to exclusive information and are constantly updating the malicious domain list. With product installations in 70 countries, and data centers across three continents, we keep track of the IT criminals' digital whereabouts.

“ Providing the ultimate layer of security with such little effort made Secure DNS an easy choice for us ”

Project Manager, multinational manufacturing company
